

# Easter Cross Craft

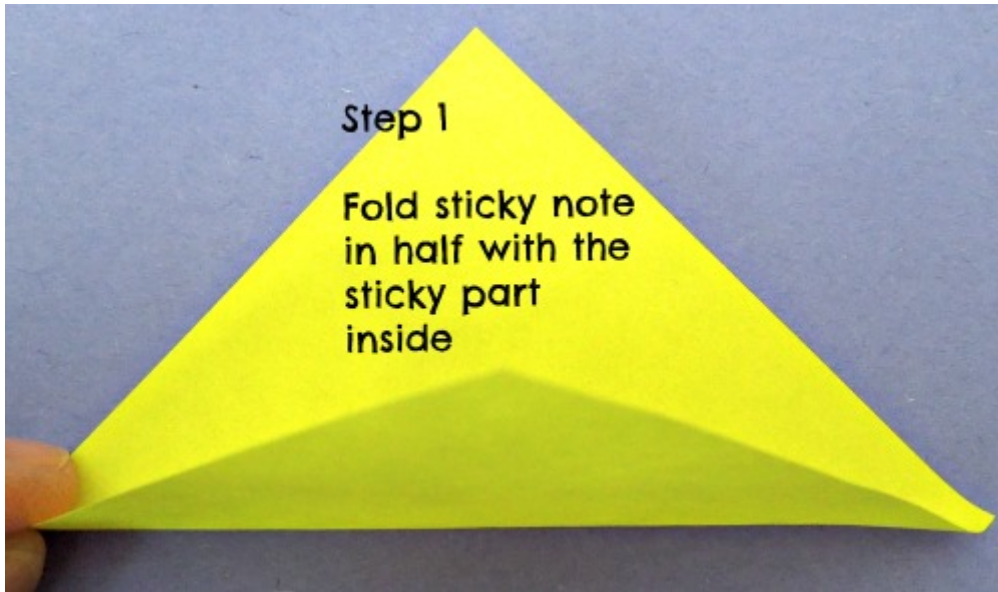

**Origami Cross**

**If your child can fold paper, they can do this project. If they have difficulty folding the paper, an adult can pre-fold the paper for them and they can assemble the pieces from that point. Start with either 3 inch square post-it notes or cut paper into 3 inch squares. Actually, post-it notes work great and save you the work of cutting , but they are more expensive. Use neon copy paper or post-it notes for a punch of color. Construction paper is too thick for folding so use it only for the background.**

## Step 1

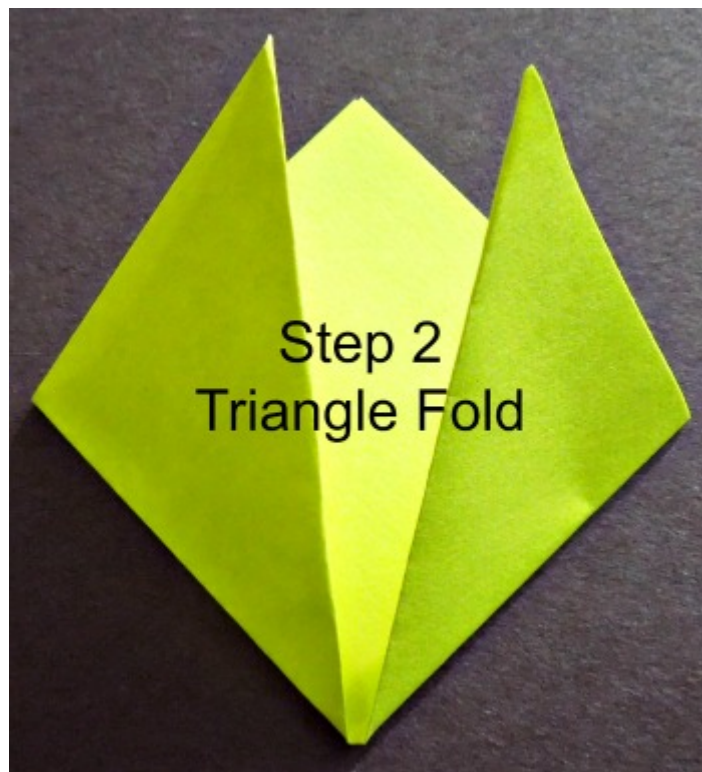

Fold the paper in half.

Triangle fold with 3 inch paper square or post-it notes.

## Step 2

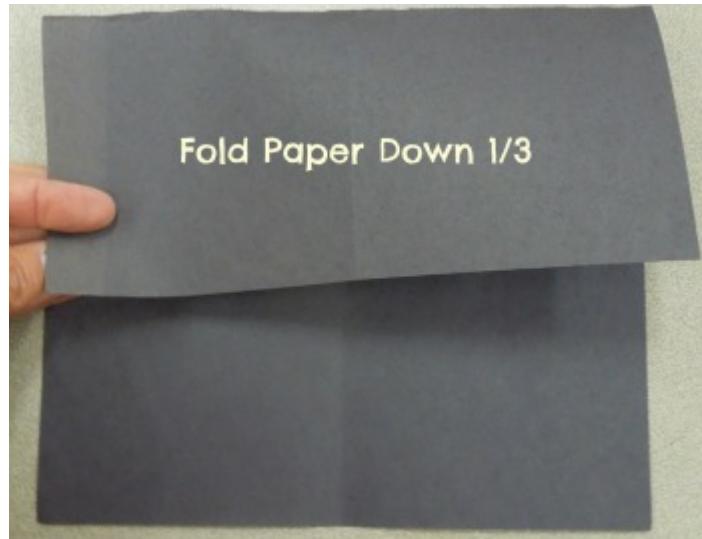

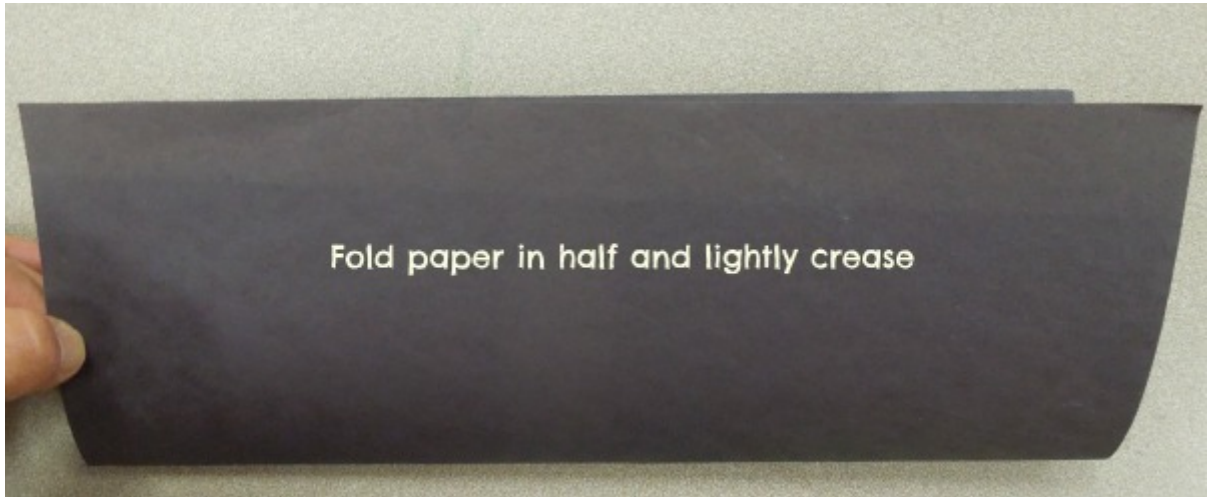

Fold the paper to form a V by folding one corner of the folded top to the half way point and the same with the other corner. See picture....

Origami Fold

### Step 3

**Fold background paper both horizontally into 1/3rd and vertically in half. This gives you a lightly creased line to follow and place the folded pieces.**

## Step 4

In the center, place 4 of the origami folded papers with the points touching to form a square.

Starting point .... 4 pieces with triangle points touching on the creased intersection point.

## Step 5

Place other folded papers slightly inside the previous one working out in each direction to form a cross.

Place 4 triangle folds in the middle with the tip of the triangles in line with the lightly creased lines.  
Continue down the page to form the bottom of the cross.
